

# WILDSCAPE GREEN SPACE MANAGEMENT

CIRCULAR ECONOMY & ENVIRONMENTAL GROWTH

## INTRODUCTION

Wildscape has recently been relaunched to provide environmentally conscious green space management. It is run by a trained and qualified Gardener and Arborist, who has a reputation as a skilled and reliable landscaper. Wildscape intend to develop a commercial green space management service that puts ecology first and helps to grow areas for wildlife habitation. This will be achieved by reevaluating green spaces to create more wildlife friendly spaces, and by putting ecology at the forefront on landscape projects, designs and builds.

As a result of business support provided by Tevi it was identified that a transition to using electric garden machinery would compliment Wildscape's new service that has ecology, wildlife habituation and environmental growth at its core. In addition each new client will be given an ecology & environment assessment followed by a green space management plan.

## GRANT AWARDED

£9,376.00

Used to purchase  
Electric garden  
machinery

## BUSINESS ASSISTANCE

*"It has been great to feel supported in my aim to reduce my impact on the environment whilst also being able to offer a more thoughtful approach to management of green spaces and habitat protection".*

Carl Rowlinson (Owner)

## IMPACT SUMMARY

The transition to renewable source of energy use and electronic machinery funded by Tevi has enabled Wildscape to reduce reliance on fossil fuels and contributing to the development of Cornwall's circular economy.

Using a more sympathetic approach to land management contributes to the targets of Cornwall's Environment Growth Strategy: Experiencing & Valuing Cornwall. The machinery will create a more sympathetic approach to land management create less pollution, along with a reduction in noise disturbance reducing stress on the surrounding fauna.
