TeviLife-PC-I (Indoor People Counter)

Features

- Counts people going in and out of indoor spaces
- Ideal for monitoring use of indoor spaces
- Ideal for monitoring room capacity

Applications

- Room occupancy
- Monitoring use of an indoor area
- Office
- Meeting rooms
- Public indoor spaces

Description

This sensor is designed to provide you with a count of people going both in and out of indoor spaces enabling you to ensure room capacity is not breached. It is also ideal for monitoring usage of indoor spaces.

The data is transmitted in real-time using TeviNET gateways (LoRaWAN®). This enables encrypted radio transmissions over long distances while consuming very little power. The data can be connected to visualisation software to provide actionable insights.
