TeviAir-TH-0 (Outdoor Temp & Humidity)

Features

- Measures temperature and relative humidity
- This sensor comes with a weather protector and solar shield, making it ideal for outdoor use
- High and Low alarm allows for alerts relating to extreme conditions such as frost or high humidity
- Sensor manipulation alert to prevent tampering, damage and theft

Applications

- Environmental conservation and preservation
- Smart towns and cities
- Precision agriculture

Description

This sensor is easy to install and enables the monitoring of temperature and humidity in a wide range of outdoor applications with full weather and solar protection. It also has an accelerometer to provide alerts if the sensor is moved or tampered with.

The data is transmitted in real-time using TeviNET gateways (LoRaWAN®). This enables encrypted radio transmissions over long distances while consuming very little power. The data can be connected to visualisation software to provide actionable insights.
